## ASX ANNOUNCEMENT

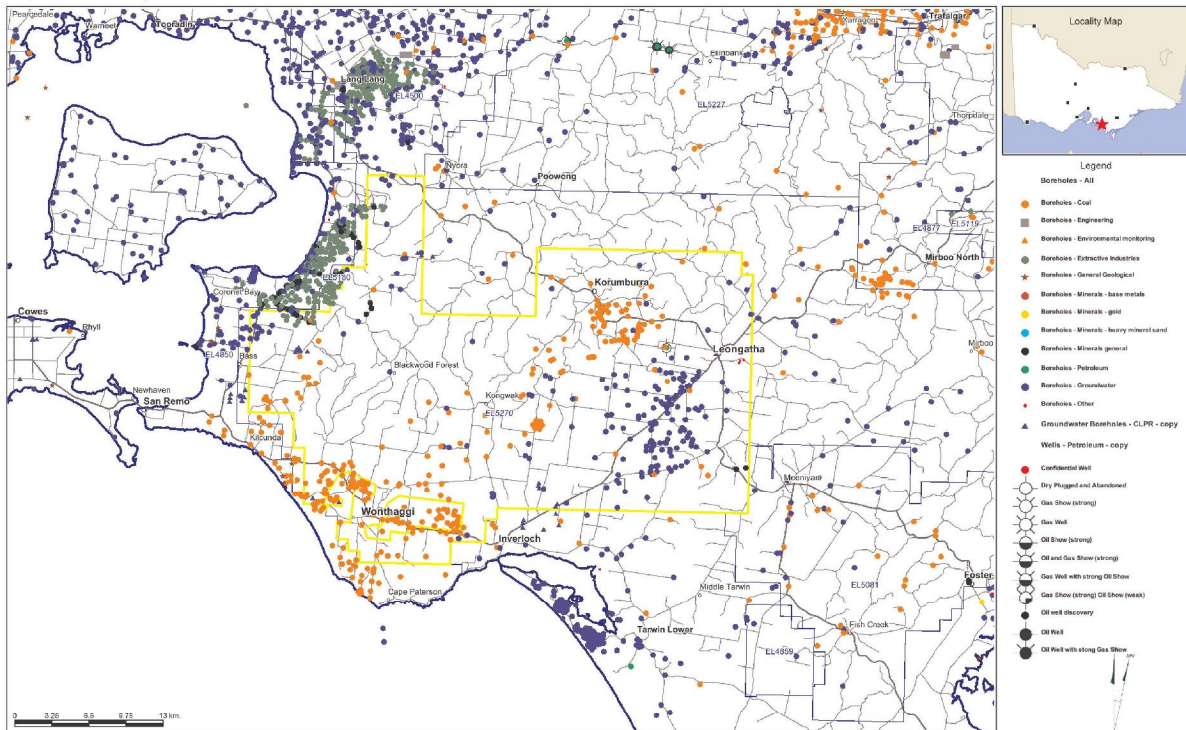

### Clean Global Energy Limited (ASX:CGV) completes acquisition of Victorian coal asset and commences work on its Victorian UCG project.

Clean Global Energy Limited (CGV) is pleased to announce that its Exploration License Application with the Victorian government for a coal exploration area in Victoria's Gippsland coal basin has been granted.

The area known as EL5270 is approximately 900 square kilometers and contains numerous exploration and other wells. Initial review of this area indicates black coal formations that appear suitable for UCG occur within this lease area.

## LOCATION MAP

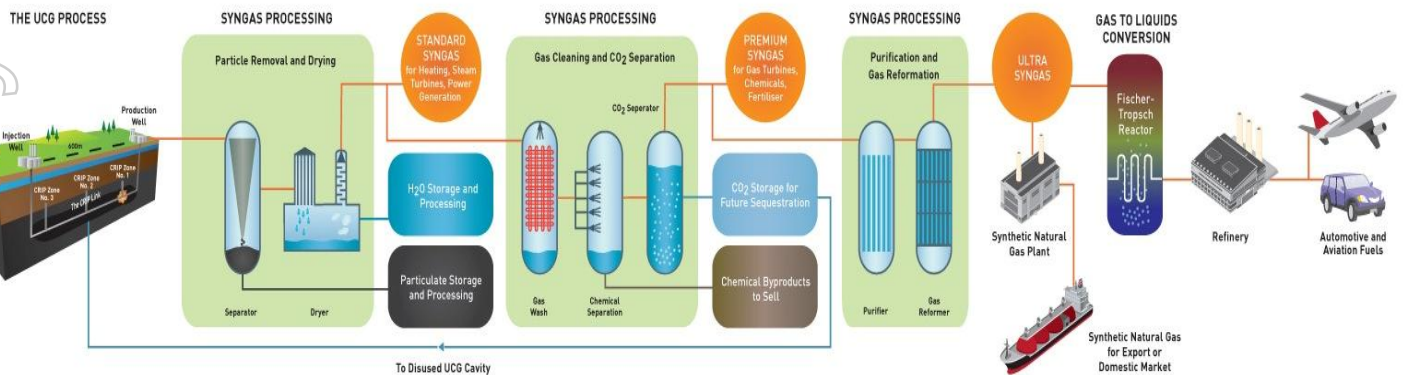

Clean Global Energy intends to fast track its Victorian Underground Coal Gasification (UCG) project on EL5270. EL5270 represents a strategic position in the Victorian energy corridor being in close proximity to power generators and other potential clients who could benefit from Clean Global Energy's UCG Syngas.

Clean Global Energy is focusing on utilising its propriatry Linear CRIP UCG technology to generate a range of UCG-Syngas products. Here's how it works.

Once the raw UCG Syngas is produced at the Production Well the Syngas is passed through a number of processes to produce Regular, Premium or Ultra Syngas depending on the requirements of our clients.

Clean Global Energy's Victorian UCG project will see an initial 5PJ commercial Syngas plant commissioned within the next 2 years. This plant is planned to be expanded up to 20PJ by 2015. Design, pre-engineering and other works have already commenced on the plant and we will shortly be lodging development applications and works programs with the Victorian Government.

Clean Global Energy has commenced discussions with a number of power generators and has already exchanged a Confidentiality Agreement with an existing power generator.

Granting of our Victorian Coal Lease is another key milestone Clean Global Energy has achieved and we are on track to achieve many more.

For further information on this announcement, please contact Mr. John Harkins on +61 2 9230 0318.

Yours faithfully,

John Harkins

## ABOUT CLEAN GLOBAL ENERGY

Clean Global Energy is a global energy company that can produce Syngas for use in heating, power generation and the production of chemicals, fertiliser, ultra clean diesel and aviation fuels.

Clean Global Energy uses a process called Linear CRIP Underground Coal Gasification (UCG) to produce Syngas.

Clean Global Energy's advanced Linear CRIP (Controlled Retractable Injection Point) UCG process provides greater efficiencies and control with less overall operating and capital costs.

Once the raw UCG Syngas is produced at the Production Well the Syngas is passed through a number of processes to produce Regular, Premium or Ultra Syngas depending on the requirements of our clients.

Clean Global Energy's primary business focus is on providing a range of Syngas products to meet our clients needs and demands. Typical users of our Syngas are power generators, chemical, fertiliser and petroleum producers.

Clean Global Energy's "Solutions Business" partners with other companies in the development of solution packages to produce power, synthetic natural gas and ultra clean fuels. Clean Global Energy also licences its technology globally.

Clean Global Energy currently has projects in Australia and Inner Mongolia, China. Our Australian projects are focused on the development of Clean Global Energy's own extensive coal tenement portfolio into commercial income producing assets. Our US\$400million Inner Mongolia, China project is Inner Mongolia's first major UCG project which will be completed in stages over 3 years. In addition to these projects we are currently in discussions with other parties both in Australia and globally to undertake UCG projects.

Clean Global Energy is a dynamic and exciting company that is quickly growing into a major international alternate energy company. We invite you to join us on our journey.
