## **ASX ANNOUNCEMENT**

### **Leading Australian and US Universities support Clean Global Energy in advancing Underground Coal Gasification (UCG) and Carbon Capture and Sequestration (CCS).**

---

The Board of Clean Global Energy Limited [ASX:CGV] is pleased to update the market on our company's UCG research and development activities.

Clean Global Energy Limited has entered into agreements with Australian and United States based universities to undertake further research into the technical and environmental applications of UCG and CCS.

Clean Global Energy will provide grants to the Australian Centre for Sustainable Mining Practices and the School of Mining Engineering, at University of NSW (UNSW) and the Colorado School of Mines (CSM) a state mining University in Golden, Colorado.

These Universities will focus on the further development of Clean Global Energy's advanced Linear CRIP UCG technology, in particular its application in deep coal seams where disused UCG cavities may be suitable for CCS. Other areas of focus will be on advanced water management techniques surrounding the UCG reactors and disused cavities, hydrology, low carbon emissions, and on-line support to control the UCG process in our future commercial operations.

Clean Global Energy will bring the two schools together to formulate the research program, building on complimentary skills within both faculties, as well as forming a combined advisory panel to deliver research-backed information and support for Clean Global Energy's commercial strategies and operations.

Commercial UCG activity is increasing globally in many nations including Australia, New Zealand, North and South America, UK, Europe, Africa, India and China. CGE is fast becoming an internationally recognised UCG company with projects in some of these countries. Having leading universities, such as UNSW and CSM, providing research, development and support to Clean Global Energy further enhances our international credentials as a leading, global UCG company.

## ABOUT CLEAN GLOBAL ENERGY

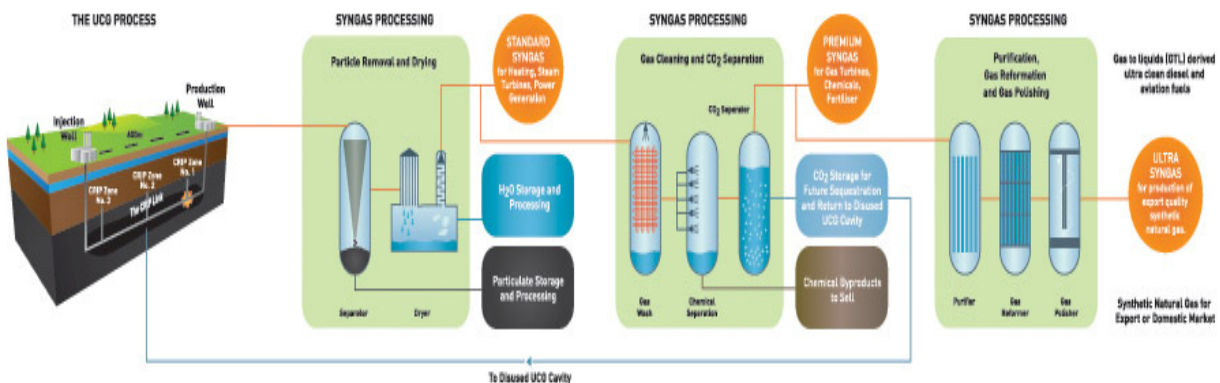

Clean Global Energy is a global energy company that can produce Syngas for use in heating, power generation and the production of chemicals, fertiliser, ultra clean diesel and aviation fuels.

Clean Global Energy uses a process called Linear CRIP Underground Coal Gasification (UCG) to produce Syngas. Here is how it works.

Clean Global Energy's advanced Linear CRIP (Controlled Retractable Injection Point) UCG process provides greater efficiencies and control with less overall operating and capital costs.

Once the raw UCG Syngas exits the Production Well it is passed through a number of processes capable of producing Regular, Premium or Ultra Syngas depending on the requirements of our clients.

Clean Global Energy's primary business focus is on providing a range of Syngas products to meet our clients needs and demands. Typical users of our Syngas are power generators, chemical, fertiliser and petroleum producers.

Clean Global Energy's "Solutions Business" partners with other companies in the development of solution packages to produce power, synthetic natural gas and ultra clean fuels. Clean Global Energy also licences its technology globally.

Clean Global Energy currently has projects in Australia and Inner Mongolia, China. Our Australian projects are focused on the development of Clean Global Energy's own extensive coal tenement portfolio into commercial income-producing assets. Our US\$400million Inner Mongolia, China project is Inner Mongolia's first major UCG project which will be completed in stages over 3 years. In addition to these projects we are currently in discussions with other parties both in Australia and globally to undertake UCG projects.

Clean Global Energy is a dynamic and exciting company that is quickly growing into a major international alternate energy company. We invite you to join us on our journey. You'll find more information on [www.cleanenergy.com.au](http://www.cleanenergy.com.au).
